'UNISTAR' XLPE CABLES

Crosslinked Polyethylene Cable abbreviated as XLPE Cable was developed to overcome the susceptibility of PILC Cables to ingress of moisture. Polyethylene which has the best electrical properties, but poor thermal properties on account of its thermoplastic nature in comparison to impregnated paper, is crosslinked by dry Nitrogen curing process to improve its thermomechanical properties without loss of electrical properties. 'Unistar' XLPE Cables are manufactured and tested as per national / international standards and also as per specific requirement of customers. Dimension of cables conforming to IS-7098 Part (II) are given in table - 1 to 12

'Unistar' XLPE Cable has the following advantages :-

- Higher power rating
- Higher emergency overload rating
- Higher short circuit rating
- Higher resistance to moisture
- Higher insulation resistance
- Simpler jointing & termination compared to PILC & PVC Cables.

These cables may also be supplied with improved fire performance characteristics. The sheath of these cables shall be specially formulated to meet the requirement of Flame Retardance (FR) or Flame Retardance with reduced halogen evolution and Low Smoke (FRLS)

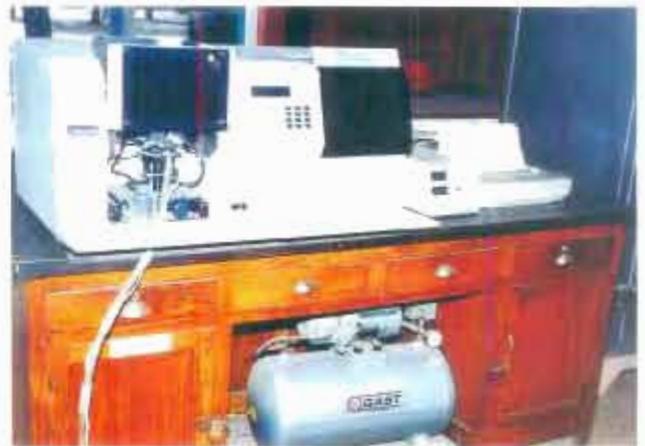

'UNISTAR' XLPE Cable finds its applications in power transmission & distribution, railways fertilizer, and petrochemical plants, submarine and under water power transmission, instrumentation and control, etc.

Cross-sectional view of 3 core XPLE cable to IS:7098 part-II

technique in a most sophisticated catenary continuous vulcanizing extrusion line, employing most advanced technology, imported from ABB Cables Sweden with dry curing.

TEST AND QUALITY CONTROL

'UNISTAR' XLPE cables are subjected to all routine and type tests as per relevant manufacturing specifications which include high voltage test, partial discharge test, dielectric power factor test, heating cycles test, impulse withstand test etc. Beside this, 'UNISTAR' XLPE cable are subjected to special long term development test programmes to ensure that cables manufactured are true to design life of 50 years. The Quality Control Department which is independent of production, maintains strict control on raw material, manufacturing process and final testing as per quality assurance scheme recommended by our collaborators ABB Cables, Sweden

INSTALLATION & ACCESSORIES

'UNISTAR' XLPE Cables are smaller and on an average 30% lighter than paper and 10% lighter than PVC insulated cables. Techniques employed in the installation of low voltage XLPE cables are similar to that employed for standard PVC insulated power cables. Some accessories such as compression lugs and ferrules, glands, splicing

MANUFACTURING

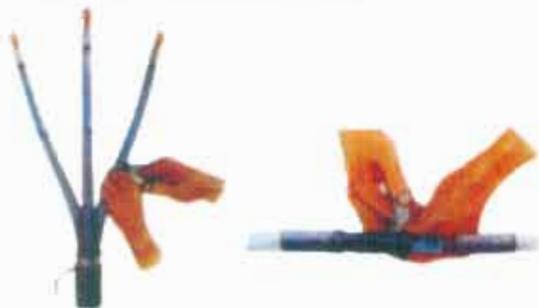

Manufacture of XLPE cables requires great skill at all stages of processing. Extrusion should be smooth, homogeneous and free from objectionable voids and contaminations. Material handling system must be designed to ensure minimum contamination. For high voltage cable, conductor and insulation shields should be uniform and smooth and must adhere to insulation without any void, imperfection and contamination. To ensure the above, 'UNISTAR' XLPE Cables are manufactured by triple extrusion

and termination kits as used for PVC cables may be used for XLPE cables. Additional advantage for XLPE cables is that it can withstand higher soldering temperature and hot pouring compound. For high voltage cables, different methods may be employed for splicing and termination, these are as under :-

(a) Taped termination and splicing : This is the most popular method. It does not require and special skill or equipment except crimping tool or welding equipment for conductor jointing.

Taped splice : In the taped splice, insulation is built up by wrapping a special electric grade self bonding EP rubber tape around the jointed conductor. Core screening and conductor screening are performed by using semi-conducting self-bonding tape.

Taped termination : A termination is built up on the site to the dimensions given in the installation instruction. The electric field grading is performed by a semiconductor layer with non-linear resistivity/stress characteristics. This type of field grading is a patented process of ABB Cable and has proved to be highly reliable. Termination takes very little space and is recommended for installations where many parallel cables are to be connected to one joint.

(b) Slip in moulded EP rubber termination and splicing : This type of termination consists of a premoulded stress cone and skirts made of very resilient weather - proof EP Rubber. These are suitable for all application with round conductor cable and also in polluted area. Compared to taped termination this is somewhat quicker and easier to install. On the other hand material cost is higher and a large stock is required, since one set of material covers only a small range of cable sizes.

(c) 'THERMOFIT' termination and splicing : These are made of heat shrinkable radiation vulcanized cross linked polyethylene tubing (semi-conducting and insulation grade) and skirts. These are fitted to the cable end or joints and set in position by shrinkfitting by application of heat. This is a patented process of Ray Chem Corporation, USA and one of the easiest and reliable methods of

termination and splicing. Standard kits are available from the manufacturer.

(d) Epoxy Cast Termination & Splicing : These are available for cables upto and including 11 KV grade from standard manufacturer in our country. Standard kits are marketed under various trade names.

TECHNICAL SERVICES

Our technical service department is specially organised to assist our valued customers in finalising the section, design, installation, jointing and termination of XLPE Cables. This department also organises demonstration of jointing & termination techniques of XLPE Cables.

SUSTAINED CURRENT RATINGS OF HV XLPE CABLES

The current ratings of HV XLPE Cables given in the different tables are based on the following assumptions.

- (i) Maximum conductor temperature for continuous operation : 90°C
- (ii) Ambient air temperature : 40°C
- (iii) Ground temperature : 30°C
- (iv) Thermal resistivity of soil : 1.5 km/w
- (v) Depth of laying (to the highest point of the cables laid direct in the ground)
 - a) 3.3, 6.6 & 11 KV cables : 90 cm
 - b) 22 and 33 KV : 105 cm
- (vi) Max. conductor temperature at the end of a short circuit : 250°C

METHOD OF INSTALLATION

1. Multi core cables installed singly.
2. Single core cables laid in trefoil formation with screen /armour bonded at both ends.

1000	1.15	1.08	1.00	0.90	0.82	0.76

Table - 29

Group rating factors for three-core cables in horizontal formation laid direct in the ground

Nominal cables in group	Spacing between cables, centres, mm				
	Touching	200	400	600	800
2	0.79	0.86	0.90	0.92	0.94
3	0.67	0.77	0.82	0.86	0.89
4	0.61	0.72	0.79	0.83	0.87
5	0.56	0.68	0.76	0.81	0.85
6	0.53	0.65	0.74	0.80	0.84
7	0.50	0.63	0.72	0.78	0.83
8	0.48	0.61	0.71	0.78	-
9	0.46	0.60	0.70	0.77	-
10	0.44	0.59	0.69	-	-
11	0.43	0.58	0.69	-	-
12	0.42	0.57	0.68	-	-

Table - 30

Group rating factors for three-core cables in single-way ducts in horizontal formation

Nominal cables in group	Spacing between ducts centres, mm				
	Touching	200	400	600	800
2	0.85	0.89	0.92	0.94	0.95
3	0.75	0.81	0.86	0.89	0.71
4	0.70	0.76	0.83	0.87	0.89
5	0.65	0.73	0.80	0.85	0.88
6	0.62	0.70	0.78	0.84	0.87
7	0.59	0.68	0.77	0.82	0.86
8	0.57	0.67	0.76	0.82	-
9	0.55	0.65	0.75	0.81	-
10	0.54	0.64	0.74	-	-
11	0.52	0.63	0.74	-	-
12	0.51	0.62	0.73	-	-

Table - 31

**Group rating factors for circuits of three single-core cables,
in trefoil laid direct in the ground**

Number of trefoil in group	Spacing between trefoil group centres, mm				
	Touching	200	400	600	800
2	0.76	0.83	0.87	0.90	0.92
3	0.64	0.72	0.79	0.83	0.86
4	0.58	0.67	0.75	0.80	0.84
5	0.53	0.63	0.71	0.77	0.81
6	0.50	0.60	0.69	0.76	0.80
7	0.47	0.58	0.67	0.74	0.79
8	0.45	0.56	0.66	0.73	-
9	0.43	0.55	0.65	0.73	-
10	0.42	0.54	0.64	-	-
11	0.41	0.53	0.64	-	-
12	0.40	0.52	0.63	-	-

Table - 32

**Group rating factors for circuits of single-core cables
in single-way ducts in trefoil**

Number of cables in group	Spacing between duct group centres, mm				
	Touching	200	400	600	800
2	0.81	0.85	0.89	0.91	0.93
3	0.69	0.75	0.81	0.84	0.87
4	0.64	0.69	0.77	0.82	0.85
5	0.59	0.65	0.74	0.79	0.83
6	0.56	0.63	0.72	0.78	0.82
7	0.53	0.60	0.70	0.77	0.81
8	0.51	0.59	0.69	0.76	-
9	0.49	0.57	0.68	0.75	-
10	0.48	0.56	0.67	-	-
11	0.47	0.55	0.66	-	-
12	0.46	0.52	0.66	-	-

Table - 33

A - Group rating factors for three core Cables laid inside concrete trench with removable covers, on cable trays where air circulation is restricted. The cables spaced by one cable diameter and trays in tiers by 300 mm. The clearance of the cable from the wall is 25 mm.

No. of cables trays in tier	No. of cables				
	1	2	3	6	9
1	0.95	0.90	0.88	0.85	0.84
2	0.90	0.85	0.83	0.81	0.80
3	0.88	0.83	0.81	0.79	0.78
6	0.86	0.81	0.79	0.77	0.76

B - Group rating factors for three core Cables laid on cable trays exposed to air, the cables spaced by one cable diameter and trays in tiers by 300 mm. The clearance between the wall and the cable is 25 mm.

No. of cables trays in tier	No. of cables				
	1	2	3	6	9
1	1	0.98	0.96	0.93	0.92
2	1	0.95	0.93	0.90	0.89
3	1	0.94	0.92	0.89	0.88
6	1	0.93	0.90	0.87	0.86

C - Group rating factors for three core Cables laid on cable trays exposed to air, the cables touching and trays in tiers by 300 mm. The clearance between the wall and the cable 25 mm.

No. of trays	No. of cables per tray				
	1	2	3	6	9
1	1.0	0.84	0.80	0.75	0.73
2	1.0	0.80	0.76	0.71	0.69
3	1.0	0.78	0.74	0.70	0.68
6	1.0	0.76	0.72	0.68	0.66

Table - 34

A - Group rating factors for single core Cables laid on Racks/Trays in covered trench with removable covers where air circulation is restricted, Trefoils are separated by two cable dia horizontally and the trays are in tiers with 30 cm. gap between them.

No. of racks/ trays in tiers	No. of trefoils in Horizontal formation		
	1	2	3
1	0.95	0.90	0.88
2	0.90	0.85	0.83
3	0.88	0.83	0.81
6	0.86	0.81	0.79

B- Group rating factors for single core Cables laid as in A but in open air.

1	1.0	0.98	0.96
2	1.0	0.95	0.93
3	1.0	0.94	0.92
6	1.0	0.93	0.90

Note : All figures given in various tables are non-binding and indicative only.
